#### **DETAILED ACTION**

### Priority

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

## **Drawings**

The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: the drawings have no reference signs whatsoever and does not point out various items referred to in the specification and claims of the instant application.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. Each drawing sheet submitted after the filling date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

Art Unit: 3765

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Bergen et al. US patent 5,693,392.

Bergen discloses all structural limitations recited in claims 1-20. The only structural limitations in claims 1-20 are to a polyamide fabric, having a ripstop weave, not having a resin finish, and a warp to weft density ratio of .9 to 1.2.

Bergen discloses an uncoated fabric with a linen or ripstop binding of polyamide filament yarns. A linen binding is symmetric in both warp and weft directions so the warp to weft density ratio would be 1 (clearly in the recited range).

All structural limitations are disclosed, all the measured variables recited by the claims 1-16 do not limit the structure of the fabric but rather the resultant measured variables of the fabric.

Claims 17-20 are product by process limitations. The MPEP states, "the lack of physical description in a product-by-process claim makes determination of the patentability of the claim more difficult, since in spite of the fact that the claim may recite only process limitations, it is the patentability of the product claimed and not of

Application/Control Number: 10/565,836

**Art Unit: 3765** 

the recited process steps which must be established. We are therefore of the opinion that when the prior art discloses a product which reasonably appears to be either identical with or only slightly different than a product claimed in a product-by-process claim, a rejection based alternatively on either section 102 or section 103 of the statute is eminently fair and acceptable. As a practical matter, the Patent Office is not equipped to manufacture products by the myriad of processes put before it and then obtain prior art products and make physical comparisons therewith." In re Brown, 459 F.2d 531, 535,173 USPQ 685, 688 (CCPA 1972).

Once the examiner provides a rationale tending to show that the claimed product appears to be the same or similar to that of the prior art, although produced by a different process, the burden shifts to applicant to come forward with evidence establishing an unobvious difference between the claimed product and the prior art product. In re Marosi, 710 F.2d 798, 802, 218 USPQ 289, 292 (Fed. Cir.1983).

All the structural limitations of the claims have been disclosed or taught above.

Therefore the applicant must show an unobvious difference between the claimed product and the prior art.

In the alternative, Bergen does not specifically disclose the myriad of measured variables recited in claims 1-16, but does disclose all structural limitations recited.

Since these measured variables are not shown to have any unexpected results or shown to have any criticality in the disclosure (less weight results in lighter fabric, higher tear strength in a stronger fabric, less air permeability results in a fabric that does

Art Unit: 3765

not allow as much air to pass, cover factor is a measure of the ratio of free space to yarn in a fabric is directly related to permeability, yarn size and fiber size and lip width are well-known weaving design variables) it would have been obvious to one of ordinary skill in the art to determine the optimum ranges of these measured fabric variables through routine experimentation.

Claims 17-20 are product by process claims and are handled exactly the same as above.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert H. Muromoto, Jr. whose telephone number is 571-272-4991. The examiner can normally be reached on 8-530, M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Welch can be reached on 571-272-4996. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
